

DIGITAL SIGNATURE – PRE-REQUISITES

The Pre-Requisites to digitally sign the FLM files:

1. Make sure the processor has a Digital Key with valid expiry date.
2. The APTRANSCO signer service is installed and running in the taskbar in-tray.

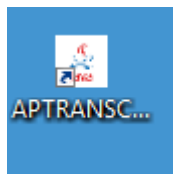

Procedure to download and install APTRANSCO Signer set up file

The downloaded for Signer file is available at location:

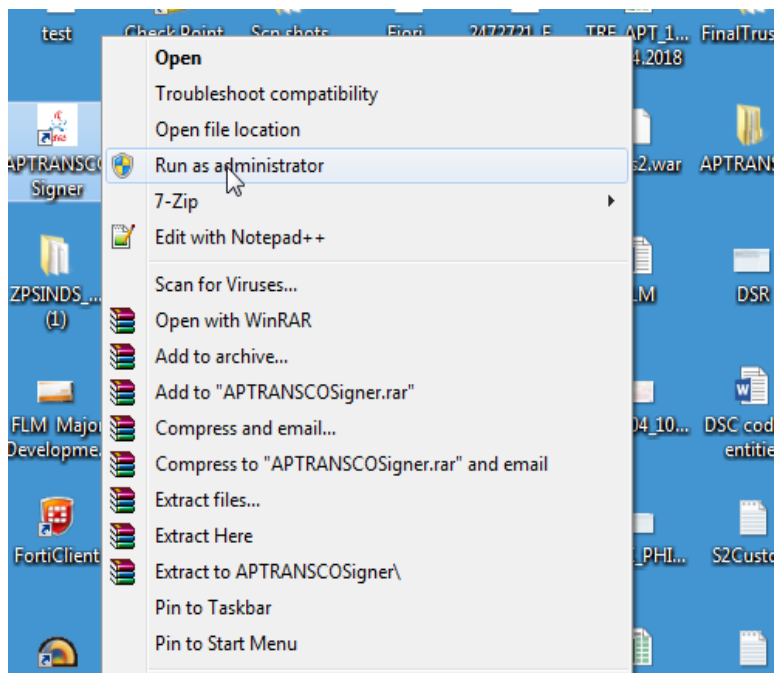

http://secmsgdemo.emudhra.com/emvv_admin/APTRANSCO/APTRANSCOSigner-SetupFile-040518.zip

- Download installer for Windows by clicking (CTRL+CLICK) on the above link.
- Unzip downloaded APTRANSCOSigner-SetupFile-040518 zip file and the files are extracted to folder.
- Right click on APTRANSCOSigner.msi and install web socket client.

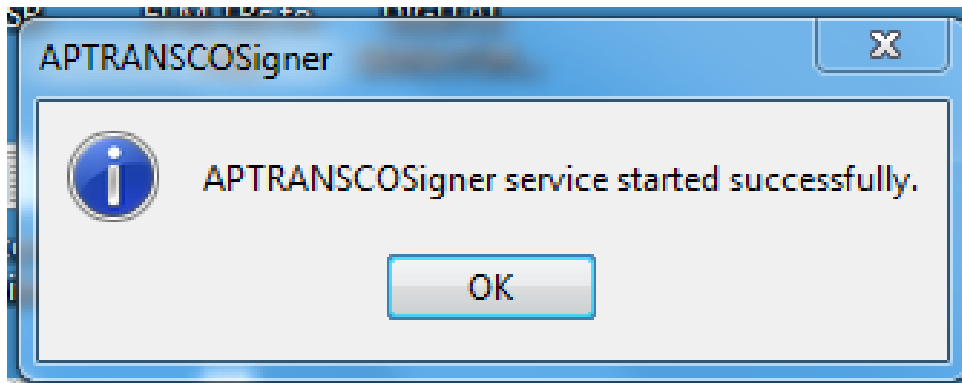

Once the APTRANSCO signer is installed, you can see an icon (APTRANSCO Signer) as shown below in the desktop.

NOTE: Right click on the above icon and in the menu, select **RUN AS ADMINISTRATOR**.

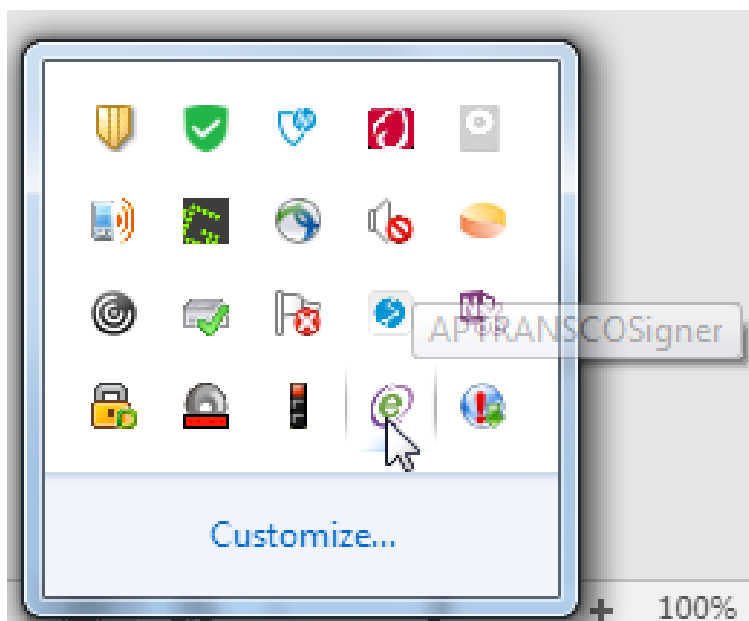

Once the Signer is run, you will see a popup as shown below. (This popup will be seen every time the system is started)

NOTE: The Signer service will start only after you click on the OK button in above screen.

The Signer Service will start running and can check in the INTRAY of the taskbar as shown below.

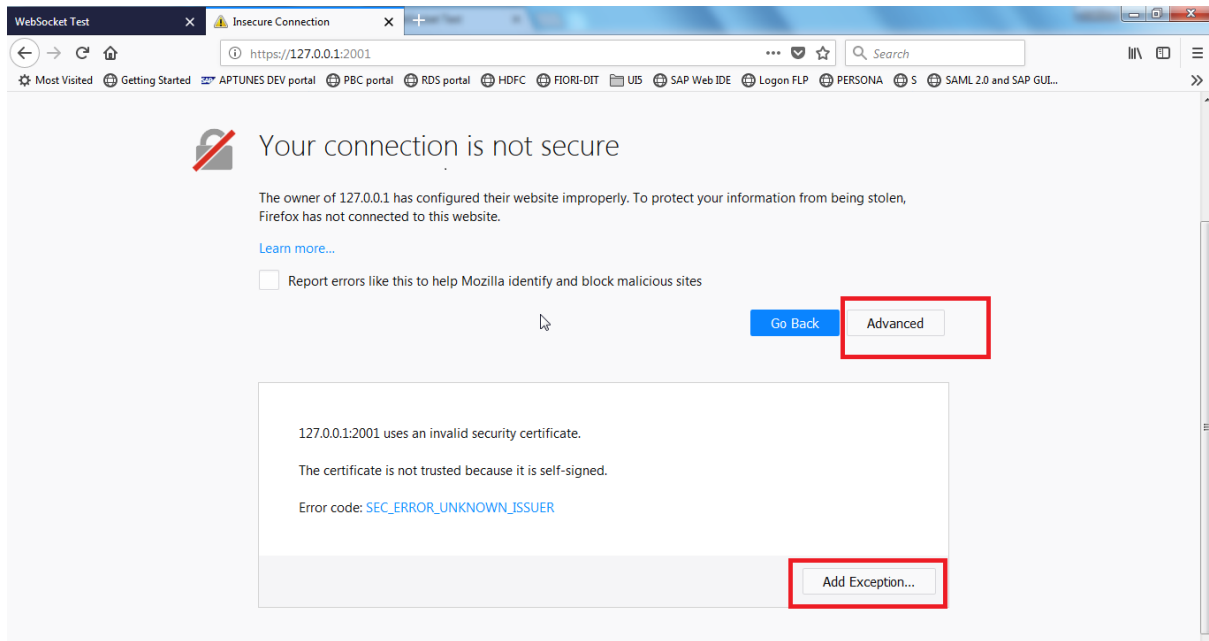

(This is a onetime activity and whenever the desktop/laptop started, the service is automatically started).

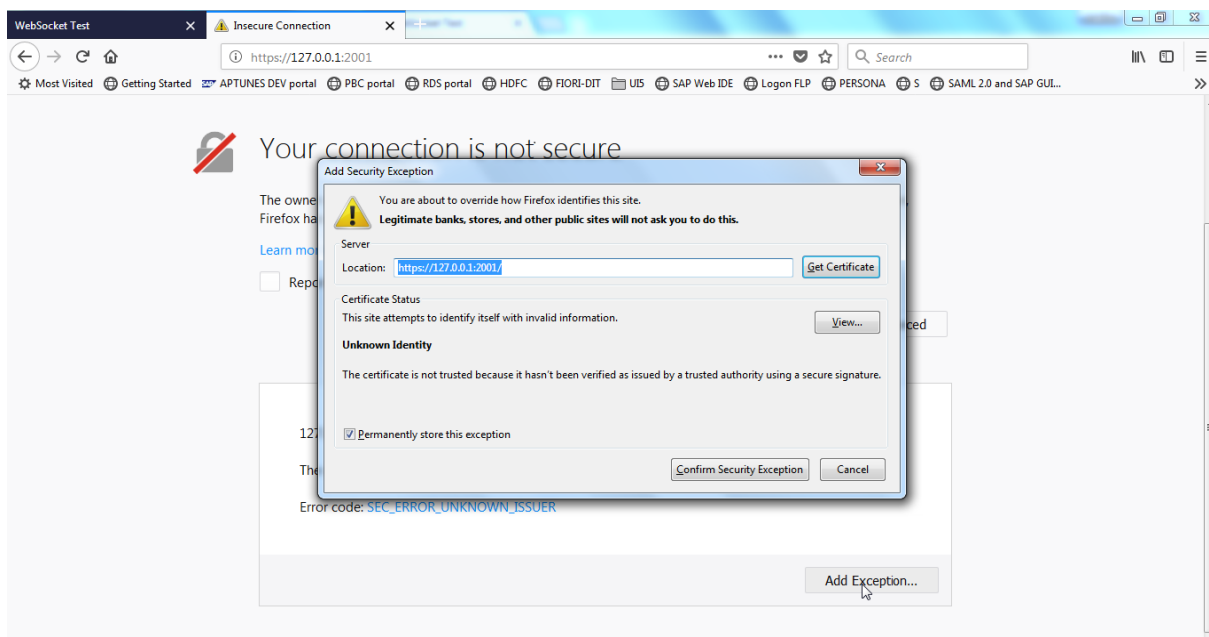

BROWSER SETTINGS FOR MOZILLA FIREFOX:

Enter the URL <https://127.0.0.1:2001> , The browser will display that the page is insecure.

Click on **Advance button** and in the below box click on **Add Exception** as shown in below image.

Click on Confirm Security Exception button in the popup to add the exception.

After this setting, users can start using the Digital Sign in MOZILA FIREFOX.
